EMAIL FROM EXTERNAL SENDER

1. Please send the statement of work from Phase 1 and the results of the additional assessment done prior to excavation. They assume that since the DOE first identified the site there was an additional assessment. I need that, please.
 - a. AAR's proposal to the state based a verbal request in June 2018, including the DOE Triage Report and AAR's Proposal for the Phase 1 work from November 2018 is attached
 - b. To our knowledge, there was no additional assessment performed after the Triage Report
2. What type of equipment (they want model numbers) of what was used to do that assessment prior to and during excavation of Phase 1.
 - a. Beyond what is in the Triage Report, we are unaware of what equipment was used by DOE.
 - b. Job Coverage
 - i. Ludlum Model 3030 alpha/beta swipe counter
 - ii. Ludlum Model 3 w/ 44-9 alpha/beta/gamma ratemeter
 - iii. Ludlum Model 2360 with 43-89, alpha beta ratemeter/scaler
 - iv. Ludlum Model 2221 w/ 44-10 sodium iodide ratemeter/scaler
 - v. Ludlum Model 19 microR dose ratemeter
 - vi. Ludlum Model 9DP integrating dose ratemeter
 - vii. Thermo/Eberline Model RO-20 dose ratemeter
 - viii. AutoMess 6150 Teletector dose ratemeter
 - c. GPS Survey
 - i. Ludlum Model 2221 w/ 44-10 2x2 sodium iodide ratemeter/scaler
 - ii. Ludlum Model 19 microR dose ratemeter
 - iii. Trimble Nomad GPS
3. The notes in the PPT re: mili and micro meters are inconsistent. Please verify the units of measurements in the PPT and send back to me.
 - a. We believe we are consistent in our units. When talking about dose rate we use mR/hr (milli-Rem/hour). The only place in the document that micro-R/hr is used is on the meter (phase) which is reading 1400 microR/hr which is approximately equivalent to 1.4 mR/hr.
4. On slide 23, there's a metal rod. They think it has a tag on it. Is that so? What did the tag say?
 - a. That is not a tag, it is mounting bracket. While we believe this was contemporary to the source, based on the location and materials of construction, we don't know whether it was part of the source or not. We did not remove it because it extended beyond the excavation. It does extend toward the adjacent area of high contamination.
5. Have you all already done an assessment of how many people live/work/go to church in the contamination area? Keith remembers that was a talking point but I don't see it in the PPT.
 - a. AAR has not performed a quantitative assessment of the people who live/work/go to church in the area. It was not part AAR's scope.
6. Please send the final versions of the bills for Phase 1. We aren't expecting any more bills for this work, correct?

- a. That is correct, we have invoiced for the complete project. The invoice for Phase 1 is attached.
- b. There is still the pending disposal of the materials excavated during Phase 1. This is pending transfer to the US Ecology landfill.

Subject: RE: Lowerline and Coolidge

Hi!

Had a conference call with the EPA and DOE today. They like our plan ☺ and it seems that EPA may fund the clean up but it depends on how dire the public health threat is as to when.

Couple follow up items:

1. Please send the statement of work from Phase 1 and the results of the additional assessment done prior to excavation. They assume that since the DOE first identified the site there was an additional assessment. I need that, please.
2. What type of equipment (they want model numbers) of what was used to do that assessment prior to and during excavation of Phase 1.
3. The notes in the PPT re: mili and micro meters are inconsistent. Please verify the units of measurements in the PPT and send back to me.
4. On slide 23, there's a metal rod. They think it has a tag on it. Is that so? What did the tag say?
5. Have you all already done an assessment of how many people live/work/go to church in the contamination area? Keith remembers that was a talking point but I don't see it in the PPT.
6. Please send the final versions of the bills for Phase 1. We aren't expecting any more bills for this work, correct?

Once we have all this info, the EPA regional health manager from EPA region 6 would need to plan a site visit and he would confirm our findings.

A speedy response is appreciated ☺

Cheryn

Cheryn

If there is anything we can do to support you, please don't hesitate to ask. We are an Alaskan Native 8(a) corporation and several of us have 20+ years in DOE either on sites or as consultants.

Greg

I've not seen a meeting invite and call in number for this yet. I can provide if we don't have one.

I also need to know if I need to invite LDEQ?

Thanks,
Kelly

EMAIL FROM EXTERNAL SENDER

I'm not an expert on implementation of the Federal Emergency Response Plan. I suggest that we rope LDEQ into this conversation since they are the lead agency for regulating radioactive material in Louisiana and need to be involved in this discussion.

Do you want me to reach out to them or does NOLA?

I can participate at 0830 but Greg is overseas presently and 7 hours ahead. I do not know his status. I can cover for him if he can't participate via Skype or similar.
